INTERNATIONAL LIVE CONGRESS OF ENDOSCOPY ULTRASOUND THERAPEUTIC EUS MEET DIGESTIVE ONCOLOGY
Dear Friends and Colleagues,

Time flies by and we are approaching another exciting EuroEUS meeting in Marseille. 2016 was probably the most successful workshop ever with about 400 participants coming from 49 countries, a 30% increase compared with the previous year. This reflects the increased interest in endosonography as well as the recognition of the high quality and popularity this meeting has gained. The basic format of EuroEus remains the same: one day of live demonstrations followed by one day of lectures, debates, oral presentations and a summary of the previous day’s live demo results.

Eus is rapidly changing from a basically diagnostic procedure to an interventional tool penetrating into our everyday practice. We see more and more drainage procedures that can substitute ERCP or percutaneous interventions and innovative techniques that combine EUS with NOTES. These new developments are undoubtedly interesting and exciting but we should not neglect the problems of our everyday routine: the inconclusive FNA results, diagnosis and management of pancreatic cysts, management of pancreatic masses. All these important topics will be adequately addressed as well.

Looking forward to meeting you all in April in Marseille, don’t forget to remind masses. All these important topics will be adequately addressed as well. With best wishes for a prosperous 2016,

Erwin Santo
