Your Choice for Transanal Rectal Surgery
New Possibilities - Increased Flexibility
Welcome

It is a great pleasure welcoming you to Amsterdam to attend the 24th European Association of Endoscopic Surgery Congress! The theme of the 2016 European Association of Endoscopic Surgery (EAES) Congress is ‘New way of seeing’. Surgery, particularly minimally invasive surgery, is predominantly a skill of the eyes. The surgeon’s eyes recognize anatomical cues and visual aspects of the disorder afflicting the patient. These observations guide the surgical dissection. New technologies such as 3D and 4K enhance the surgeon’s eyesight rendering operative procedures more safely. These and other innovating technologies will be shown and discussed during the congress and the Master Classes on Wednesday.

‘New way of seeing’ marks a new era of the EAES. An enhanced focus on education employing digital learning environments, telementoring and EAES Clinical Fellowships is a cornerstone of the EAES 2016 course. The congress offers the entire spectrum of visceral, thoracic and pediatric minimally invasive surgery with streamed programs on colorectal surgery, bariatric surgery, innovating technology and hepato-biliary-pancreatic surgery. Side to side unedited videos will provide step to step knowledge of minimally invasive procedures.

The EAES has a strong tradition of consensus development conferences combining the best available evidence with the experiences and insights of an expert panel. Recommendations and statements are shared with the attendants who can cast their votes. Digital voting after the congress through the EAES website engages those who could not attend the meeting in person. Pancreatic surgery and groin hernias are the topics of the 2016 EAES Consensus Conferences. The EAES, the European Hernia Society, the International Endo Hernia Society, the Americas Hernia Society, the Asia Pacific Hernia Society, the Australasian Hernia Society and the Afro Middle East Hernia Society have collaborated to develop global guidelines for management of patients with groin hernias. This emphasizes the ambition of the EAES to reach out and develop a global network.

The opening ceremony will provide you with a new way of seeing Amsterdam and the life of Dutch surgeons. Dr. Emilie Gordenker, Director of the Mauritshuis in The Hague, home of The Anatomy Lesson by Rembrandt van Rijn, will take you back to the Dutch Golden Age and introduce a new way of seeing. Please join the ceremony and the reception in the exhibit to follow. The social event on Thursday evening will take you on a tour by boat through the canals and rivers of Amsterdam. A buffet on the beach adjacent to the Congress Centre RAI and Dutch DJs will complete a memorable evening in Amsterdam.

Discover new avenues in minimally invasive surgery, meet your worldwide colleagues, foster new friendships and enjoy Amsterdam!

Jaap Bonjer
EAES 2016 Congress President
Minimally invasive surgery has evolved and matured during the last quarter of a century. Subsequently, it has already had an immense impact on millions of patients worldwide.

The Dutch surgical community embraced complex minimally invasive techniques immediately after its first introduction. The current EAES congress president, prof. dr. Jaap Bonjer, was the founder of the Dutch Endoscopic surgical Society (NVEC) in the beginning of the 20th century. Ever since, our Dutch society hosts surgeons, gynaecologists, urologists, paediatric surgeons, thoracic surgeons, medical technical engineers and operating nurses. These different surgical disciplines focus on learning from each other in order to improve the quality of our surgical treatment.

We have the pleasure to announce that our exclusive Dutch Endoscopic Surgical Society meeting (NVEC) is integrated in the prestigious 24th International Congress of the EAES in Amsterdam. It is a one-of-a-kind meeting in our respected field, rich in scientific knowledge that allows interactions with the participating surgeons, gynaecologists, urologists, paediatric surgeons, thoracic surgeons, medical technical engineers and operating nurses.

During the 4 days congress the NVEC presents multidisciplinary and innovative minimally invasive surgical aspects of pelvic abnormalities. The meeting will discuss the best publications of the year in the field of laparoscopy, robotic surgery, 3D techniques, immunofluorescence, navigation technology as well as focus on other new and innovative minimally invasive surgery methods. Interactive discussions during intense master classes and plenary lectures will intensify the gathered scientific knowledge and translate this to daily practice situations.

Welcome to Amsterdam!

**GUIDELINES FOR PRESENTATION**

**FREE PAPER ORAL - VIDEO PRESENTATION**

Seven minutes are allocated for oral presentation and three minutes for discussion. Please do not run overtime! Ten slides are usually enough.

**AV PREVIEW ROOM**

A room is available for presentation preview.

Speakers’ full co-operation in terms of ensuring the smooth-running of their presentation will greatly enhance the quality of the congress and will be appreciated.

Speakers using Microsoft PowerPoint for their presentation should bring their USB stick, CD, and/or laptop computer to the presentation preparation room no later than two hours before the start of their session in order to ensure compatibility and correct function.

Speakers for the first session of each day should hand in their presentation the previous evening at least two hours before closing time.

Presentations may be adjusted prior to downloading onto the network.

The use of personal laptops during the sessions will compromise the smooth running of a very busy program, and we strongly advise against this.

Technicians will be available to assist you with your presentation and the set-up.

Size of presentations: Presentations with incorporated figures and especially video clips may cause problems and delays if not sorted out beforehand. Such presentations should be downloaded and distributed to the session name as early as possible in the preview room.

Please collect your presentation after your session from the presentation preview room.

We recognize that slides and Power Point presentations are personal property and they will be treated as such. Please do not hesitate to ask at the AV preview room if you have any questions.

**E-POSTER PRESENTATION (DIGITAL POSTERS)**

All submitted posters will be available for inspection on flat screen poster display stations which are located in the dedicated E-poster area which is located in the exhibition hall on the ground floor. The posters will be grouped according to their topic.

Posters are numbered as can be found on page 121 and on the app. The same numbering system is used to identify which posters are displayed on which flat screen poster display station. Please note there are 20 interactive stations each numbering 35 - 50 posters which are slowly cycling through with each giving a 40 second viewing time.

Poster presentation sessions will take place on Thursday 16th June and Friday 17th June, from 07:30 - 08:15 hrs. At this time, delegates who have submitted a poster and have been invited by the reviewing committee to give further information, will present their posters in 1 of the 6 special Poster presentation sessions. These presentations will last 2-3 minutes and are open to all congress delegates who take an interest and who may ask questions.

Note that if the author of the poster is not present during these sessions, the poster will not be eligible for discussion or for the prize.

The jury will identify the best 2 posters in each group. The group of best posters will be reviewed by the Program committee, who will select the winners for the EAES Poster prizes to be announced on Friday late afternoon.

All selected posters will be displayed on all stations as the best posters from Friday 12 noon until the prize session on the Friday prior to the General Assembly at 18.00 hrs in the Auditorium located on the ground floor.
IDENTIFICATION BADGES

Name badges will be issued to all participants when they arrive at registration. Access to all scientific sessions as well as to the exhibition will be possible, only, with your personal badge. Participants are kindly requested to wear their badges during all meeting activities.

Location:  ROOM 2: G104-105

Laparoscopic surgery for gastric cancer

The first laparoscopic distal gastrectomy was performed by dr. Kitano in 1994 in Fukuoka, Japan. In Korea, prof. Dr Hyung Ho Kim is one of pioneers of laparoscopic gastrectomy and the Korean Laparo-endoscopic Gastrointestinal Surgery Study (KLASS) group. Recently the short term outcome of the KLASS 01 trial has been published which compares open distal gastrectomy with laparoscopic distal gastrectomy. In Europe two randomized controlled trials on open versus laparoscopic distal and total gastrectomy (the LOGICA trial and the European STOMACH trial) are recruiting patients. This satellite symposium in collaboration with the Dutch upper GI surgery committee gives a state of the art overview of laparoscopic gastrectomy for cancer.

Program:

12:40 - 12:45   Opening

12:45 - 13:10   Laparoscopic gastrectomy: promises and pitfalls learned from KLASS trials
prof. dr. H.H. Kim, Seoul National University Bundang Hospital, Seoul, Korea

13:10 - 13:35   Entry of laparoscopic gastrectomy in The Netherlands (STOMACH/ LOGICA)
Prof. van Hillegersberg, University Medical Center Utrecht, Utrecht, The Netherlands & prof. dr. van der Peet, VU medical Center, Amsterdam, The Netherlands

13:35 - 13:40   Closure

Chairman:  DR. J.W. VAN DEN BERG, MAASSTAD HOSPITAL, ROTTERDAM, THE NETHERLANDS
DR. J.P. RUURDA, UNIVERSITY MEDICAL CENTER UTRECHT, UTRECHT, THE NETHERLANDS
