Teaching Methodology

The key concept of successful teaching is student engagement, that is, involving students as much and as effectively as possible in teaching. This yields advantages for both, the students and the instructor. Involving the students generally increases their motivation. In particular, it enhances the students' understanding of the presented material; theories and concepts are easier to understand by discussing them and applying them to specific problems. Involving the students also helps the instructor assessing the students' learning and the effectiveness of her/his techniques. Apart from that, it is generally more fun to interact with people instead of solely presenting material.

Teaching Experience

Fall 2024-- Present	Derivatives and Risk Management
Spring 2023-- Present	Asset Pricing
Spring 2023-- Present	Supervision of Bachelor's and Master's Theses
Fall 2022-- Present	Dynamic Asset Allocation
Fall 2022	Supervision of a Master's Thesis

Teaching Competence

2025--2026	Lecturer Training Programme
------------	-----------------------------

Other Teaching-Related Activities
