Teaching Philosophy

My aim is to motivate students to learn and understand new topics in a friendly, open minded and positive atmosphere. Teaching has been an essential element of my previous employments as well as my work at the University of Southern Denmark. To apply and disseminate knowledge to the students my teaching involves research based methods. Depending on the topic, I mix teaching methods that build a knowledge base with methods that enable students to deepen their understanding by doing their own research as well as by discussing and presenting in the classroom. Teaching should be grounded in concepts of student learning and development. However, teaching is a steadily process of learning new strategies, new ideas and new philosophies from students and colleagues.

Teaching Methods

Lecturing

Classroom discussion

Group work

Student presentations

Journal Club

Flipped classroom

Written home assignments with presentation in class

Online teaching and supervision

Teaching Experience

Since 2012, I am involved in University teaching on a regular basis. I taught Seminars, Bachelor and Master Courses in different fields of Economics like Agricultural Policy and Market Analyses, Food Retail Pricing, Microeconomics, Spatial Economics, Environmental and Resource Economics, International Trade.
