

Teaching Portfolio

1. Pedagogical philosophy

The foundation for my teaching is practical relevance. My primary task is to convey theory that offers concrete applications. I find it important to discuss the strengths and weaknesses of theories in a practical context.

I utilize the knowledge, methods, concepts, and theories from my research areas to enhance students' abilities to independently solve problems in their fields. My teaching often includes various practical cases with real-world issues, where theory is exemplified and solutions are developed through student involvement.

Specifically, when I design a course, its content is made relevant by incorporating updated practical issues. In each session, I encourage students to stay informed about societal developments related to the specific subject.

2. Teaching experience

Current teaching activities

M.Sc.

- Supply Chain Management
- Operations Management
- International Field Studies
- Advisor at Master theses

Bachelor of commerce - part 2 - Supply Chain Management

- Operations & Supply Chain Management
- Supply Chain Design
- Supply Chain Innovation
- Advisor at seminars and HD theses

Master in IT

- Business Continuity Management course package
- IT and Business Development in Small and Medium-Sized Enterprises course package
- IT Project Management course package
- Advisor at Master in IT theses

PhD-course

Publish or Perish: Preparing, Writing and Reviewing Business Research

3. Pedagogical competence

Completed the adjunct teaching qualification at the University of Southern Denmark in 2006.
