## Profile

As a clinical pharmacist and former employee at a community pharmacy I have a strong knowledge about drugs, compliance, drug handling by patients and possible challenges of medication safety among all kinds of patients. Doing my master thesis I investigated the opportunities for offering more patients medicine services held by the community pharmacy by using video communication to overcome geographical barriers. I used semi structured interviews and thereby know the qualitative method. Based on the results of my master thesis I was invited to speak at the Danish National Congress of Community Pharmacy Pharmacist. Furthermore I was hired to teach other pharmacies in how to use the setup I developed doing my master thesis.
