Research interests

The impact of non-protein coding RNAs like microRNAs and, more recently, long noncoding RNAs on eukaryotic gene regulation just started to be understood. The Kornfeld lab would like to take part in this 'Noncoding revolution' by identifying disease-associated noncoding RNAs and investigating their role in signaling circuits regulating cellular and organismal energy homeostasis in health and metabolic disease. We apply state-of-the-art techniques, for instance next-generation sequencing, transgenic mouse models and in vivo RNA inhibition approaches to understand the intricate biology of disease-associated noncoding RNAs. Our ultimate goal is to define novel RNA targets for correction of metabolic diseases.
