Teaching practice

I have taught at UCLA, U. Copenhagen, U. Edinburgh and U. Southern Denmark and I enjoy teaching at every level from BA to PhD. Most of my teaching is within my own discipline (philosophy) where I most frequently teach in my specialties – epistemology, philosophy of science, philosophy of mind. However, I have also taught philosophy of language, philosophy of cognitive psychology and philosophy of the history of 20th century philosophy. Moreover, I teach a good deal of courses in theory of science and research communication to students of other disciplines and I really enjoy how doing to gives me an insight into other fields than my own. While each type of course comes with its own challenges, I try to adopt a relaxed classroom atmosphere that allows for plenty of discussion. In general, I take the ideal of research-based teaching to be an extremely important one at every level of teaching. Rather, than thinking of integrating research into teaching as a chore, I think of it as a major advantage. The sense of exploration that may be conveyed by research-based teaching tends to motivate students far more than going through textbook material. And for me the classroom offers a great setting for trying out new ideas.
