Pedagogical Idea

My passion for teaching has evolved from my passion for learning. I believe that educating students, people who chose to devote a part of their life to improving themselves, is a great responsibility and a privilege. When teaching, I aim to help students understand the "whys" behind technical accounting concepts. Given the importance of clear communication in today's multifaceted business environment, I also aim to help students improve how they communicate the conclusions of complex technical analyses to people who may not understand these analyses.

Pedagogical Competence

During my PhD, I have participated in a formal course about university teaching. In this course, I have learned about interacting with students, mentoring, and course design. I am currently completing the Lecturer Training Programme at SDU.
