

1st Nordic Prostate Embolization Course

The 16th of May 2019 at Odense University Hospital, Denmark (Penthouse – second floor)

Course content

Minimal invasive procedure is needed for patients with severe co-morbidity to treat prostate hematuria as well as enlarged prostate, where the patients have difficulty getting rid of the large residual urine. Embolisation of the prostate, like transurethral microwave thermotherapy (TUMT), is a treatment option. Embolisation of the prostate could be a treatment principle that has room for selected patients for the most frequently used surgical treatment - transurethral prostate resection (TUR-P).

Advantages of embolization over TUR-P are that treatment:

1. An outpatient / day case treatment can be performed
2. Is performed in local anesthesia
3. Is not accompanied by the same complications as surgery (bleeding, TUR syndrome)

Objectives

The course in embolization will focus on patient selection, surgical/radiological techniques, patient work up and how to handle the perioperative period e.g. pain. There will also be discussions how to maintain and develop prostate embolization competence in the future.

Faculty

- Professor **Lars Lund**, MD, DMSci, FCS(HK), Consultant Urologist (Odense)
- Associate Professor, **Stevó Duvnjak**, MD, PhD, EBIR Interventional Radiologist (Odense)
- Associate Professor, **Margrethe Andersen**, MD, Consultant Urologist (Odense)
- International faculty - TBA

Programme

08:30	Welcome and Introduction - Ass.prof. Duvnjak S
08:40	Faculty and Participants introductions –all
08:55	Benign Prostatic Hyperplasia (BPH) –clinics, diagnosis and treatment overview - Prof. Lund L
09:25	Urological minimal invasive treatment-patient selection and clinical assessment of patients with BPH - Ass.prof. Andersen M.
09:55	Coffee Break
10:20	Prostatic artery embolization- patient selection, technique - Ass.prof. Duvnjak S
10:50	Rotation angiography -Radiological technician
11:05	Live case
12:00	Lunch
13:00	Prostatic artery embolization- experience from the expert center - Dr.med. Attila Kovacs, Bonn, Germany
13:45	What to do after embolization - Ass.prof. Andersen M and Ass.prof. Duvnjak S
14:15	Outcome after embolization, complication and follow-up -TBA

Diploma

Diplomas will be handed out to participants at the end of the course. For PhD students the course can, if there is a request, be a part of the PhD programme and supplementary information can be given.

Who can apply for the course?

Radiologists, urologists and technicians with special interest in embolization and treatment of prostate. PhD students in the field of prostate, cancer or embolization. Residents in urology and radiology with special interest in prostate treatment and surgery.

Information

The course is given in English.

PhD students who would like to include this course in their education, please specify in your application. You will then be asked to prepare a case to present during the course. A group discussion beforehand can be arranged for preparation of the presentation as a part of the PhD programme.

Registration fee is DKK 1495,-
