Research outputs

Longitudinal associations between depression and diabetes complications: a systematic review and meta-analysis
European Depression in Diabetes (EDID) Research Consortium, Dec 2019, In : Diabetic Medicine. 36, 12, p. 1562-1572

Back to the future: 25 years of ‘Guidelines for encouraging psychological well-being’ among people affected by diabetes

Study protocol of Diabetes LEAP: a longitudinal study examining emotional problems in adolescents with type 1 diabetes and their parents/caregivers

Prevalence of insomnia (symptoms) in T2D and association with metabolic parameters and glycemic control: meta-analysis

Anxiety is common and costly in T2DM - why psychology matters

Comorbid elevated symptoms of anxiety and depression in adults with type 1 or type 2 diabetes: Results from the International Diabetes MILES Study
Psychosocial health care needs of people with type 2 diabetes in primary care: views of patients and health care providers

Prevalence and correlates of diabetes distress, perceived stress and depressive symptoms among adults with early-onset Type 2 diabetes: cross-sectional survey results from the Danish DD2 study

Is Self-Compassion Related to Behavioural, Clinical and Emotional Outcomes in Adults with Diabetes? Results from the Second Diabetes MILES—Australia (MILES-2) Study

Comment on the consensus report on the management of hyperglycaemia in Type 2 diabetes by the American Diabetes Association and the European Association for the Study of Diabetes

What Do Adults with Type 2 Diabetes Want from the "perfect" App? Results from the Second Diabetes MILES: Australia (MILES-2) Study

Psychiatric disorders as risk factors for the development of type 2 diabetes mellitus: an umbrella review protocol

Sustainable improvement of HbA1c and satisfaction with diabetes care after adding telemedicine in patients on adaptable insulin regimens: Results of the TeleDiabetes randomized controlled trial

Prospective memory slips are associated with forgetting to take glucose-lowering therapies among adults with diabetes: results from the second Diabetes MILES – Australia (MILES-2) survey

Modeling Interactions Between Latent Variables in Research on Type D Personality: A Monte Carlo Simulation and Clinical Study of Depression and Anxiety

Assessing the perceived impact of diabetes on quality of life: psychometric validation of the DAWN2 Impact of Diabetes Profile in the second Diabetes MILES - Australia (MILES-2) survey

Type D personality and social relations in adults with diabetes: results from diabetes MILES–The Netherlands

DO PSYCHIATRIC DISORDERS INCREASE THE RISK OF DEVELOPING TYPE 2 DIABETES MELLITUS? - A PROTOCOL OF A MATCHED REGISTER-BASED COHORT STUDY
More work is needed to better understand diabetes distress as a predictor of all-cause mortality in type 2 diabetes
Lindekilde, N. & Pouwer, F., Oct 2018, In : Diabetologia. 61, 10, p. 2247–2248

The associations between diabetes distress and self-efficacy, medication adherence, self-care activities and disease control depend on the way diabetes distress is measured: comparing the DDS-17, DDS-2 and the PAID-5

Diabetes distress is more strongly associated with HbA1c than depressive symptoms in adolescents with type 1 diabetes: Results from Diabetes MILES Youth-Australia

Diabetes stigma is associated with negative treatment appraisals among adults with insulin-treated Type 2 diabetes: Results from the second Diabetes MILES - Australia (MILES-2) survey

Mindfulness and fear of hypoglycaemia in parents of children with Type 1 diabetes: Results from Diabetes MILES Youth - The Netherlands

What is the best measure for assessing diabetes distress? A comparison of the Problem Areas in Diabetes and Diabetes Distress Scale: results from Diabetes MILES–Australia

The role of hypoglycemia in the burden of living with diabetes among adults with diabetes and family members: results from the DAWN2 study in The Netherlands

Emotional Well-Being Factors Associated with Sexual Dysfunction in Adults with Type 1 or Type 2 Diabetes: Results from Diabetes MILES—Australia

Identification of barriers to insulin therapy and approaches to overcoming them
Russell-Jones, D., Pouwer, F. & Khunti, K., 2018, In : Diabetes, Obesity and Metabolism. 20, 3, p. 488–496

Advanced Glycation End Product (AGE) Accumulation in the Skin is Associated with Depression: The Maastricht Study

Depression: a common and burdensome complication of diabetes that warrants the continued attention of clinicians, researchers and healthcare policy makers
Pouwer, F., Jan 2017, In : Diabetologia. 60, 1, p. 30-34 5 p.
Assessing Psychological Insulin Resistance in Type 2 Diabetes: a Critical Comparison of Measures

Association of Microvascular Dysfunction With Late-Life Depression: A Systematic Review and Meta-analysis

Associations Between Physical Activity and Depressive Symptoms by Weight Status Among Adults With Type 2 Diabetes: Results from Diabetes MILES - Australia

Cohort profiles of the cross-sectional and prospective participant groups in the second Diabetes MILES-Australia (MILES-2) study

Comment on Butwicka et al. Psychiatric Disorders and Health-Related Quality of Life in Children With Type 1 Diabetes Mellitus

Cut points for identifying clinically significant diabetes distress in adolescents with type 1 diabetes using the PAID-T: Results from diabetes MILES youth-Australia

Depressive Symptoms Are Negatively Associated with Glucose Testing and Eating Meals on Time among Individuals with Diabetes in Zambia

Diabetes Complications and Depressive Symptoms: Prospective results from the Montreal Diabetes Health and Well-Being Study

Diabetes mellitus

Fatigue in type 1 diabetes: an understudied problem

Gender differences in disordered eating behaviors and body dissatisfaction among adolescents with type 1 diabetes: Results from diabetes MILES youth-Australia

Low vitamin D levels are not a contributing factor to higher prevalence of depressive symptoms in people with Type 2 diabetes mellitus: the Hoorn study
Paediatric parenting stress in fathers and mothers of young children with Type 1 diabetes: a longitudinal study

Psychological Factors and Diabetes Mellitus

Screening for and subsequent participation in a trial for depression and anxiety in people with type 2 diabetes treated in primary care: Who do we reach?

Severe hypoglycemia, impaired awareness of hypoglycemia, and self-monitoring in adults with type 1 diabetes: Results from Diabetes MILES-Australia

Strengths, Risk Factors, and Resilient Outcomes in Adolescents With Type 1 Diabetes: Results From Diabetes MILES Youth-Australia

The Use of Mobile Applications Among Adults with Type 1 and Type 2 Diabetes: Results from the Second MILES-Australia (MILES-2) Study

Validation of the WHO-5 as a first-step screening instrument for depression in adults with diabetes: Results from Diabetes MILES - Australia

Does Mindfulness-Based Cognitive Therapy benefit all people with diabetes and comorbid emotional complaints equally? Moderators in the DiaMind trial

Review of research grant allocation to psychosocial studies in diabetes research

The Use of Mobile Applications Among Adolescents with Type 1 Diabetes: Results from Diabetes MILES Youth-Australia

Effect of vitamin D supplementation on health status in non-vitamin D deficient people with type 2 diabetes mellitus

Suicidal ideation reported by adults with Type 1 or Type 2 diabetes: results from Diabetes MILES-Australia

The Association of Mindful Parenting with Glycemic Control and Quality of Life in Adolescents with Type 1 Diabetes: Results from Diabetes MILES-The Netherlands

Diabetes MILES Youth-Australia: methods and sample characteristics of a national survey of the psychological aspects of living with type 1 diabetes in Australian youth and their parents

Associations of low grade inflammation and endothelial dysfunction with depression - The Maastricht Study

Depressive symptoms and all-cause mortality in people with type 2 diabetes: a focus on potential mechanisms

Subjective Wellbeing Among Adults with Diabetes: Results from Diabetes MILES—Australia

Mindfulness facets as differential mediators of short and long-term effects of Mindfulness-Based Cognitive Therapy in diabetes outpatients: Findings from the DiaMind randomized trial

Prospectively measured lifestyle factors and BMI explain differences in health-related quality of life between colorectal cancer patients with and without comorbid diabetes

The impact of having both cancer and diabetes on patient-reported outcomes: a systematic review and directions for future research

The relationship between parenting stress and parent-child interaction with health outcomes in the youngest patients with type 1 diabetes (0-7 years)

Vitamin D status and health-related quality of life in patients with Type 2 diabetes

Explaining psychological insulin resistance in adults with non-insulin-treated type 2 diabetes: The roles of diabetes distress and current medication concerns. Results from Diabetes MILES—Australia

Psychological and personality factors in type 2 diabetes mellitus, presenting the rationale and exploratory results from The Maastricht Study, a population-based cohort study
Association of Type D personality with increased vulnerability to depression: Is there a role for inflammation or endothelial dysfunction? - The Maastricht Study

Anxiety and Depressive Symptoms as Predictors of All-Cause Mortality among People with Insulin-Naïve Type 2 Diabetes: 17-Year Follow-Up of the Second Nord-Trøndelag Health Survey (HUNT2), Norway

Correlates and outcomes of worries about hypoglycemia in family members of adults with diabetes: The second Diabetes Attitudes, Wishes and Needs (DAWN2) study

Diabetes, Depression, and Cardiovascular risk

Does self-efficacy mediate the cross-sectional relationship between perceived quality of health care and self-management of diabetes? Results from Diabetes MILES - Australia

Intraperitoneal versus subcutaneous insulin therapy in the treatment of type 1 diabetes mellitus

Effectiveness of a stepped care intervention for anxiety and depression in people with diabetes, asthma or COPD in primary care: A randomized controlled trial

Subjective sleep impairment in adults with type 1 or type 2 diabetes: Results from Diabetes MILES--The Netherlands

The impact of diabetes on neuropathic symptoms and receipt of chemotherapy among colorectal cancer patients: results from the PROFILES registry

Impact of cancer on use of glucose-lowering drug treatment in individuals with diabetes: potential mechanisms
Pouwer, F., Jun 2015, In : Diabetologia. 58, 6, p. 1378-9

Psychological and pharmacological interventions for depression in patients with diabetes mellitus: an abridged Cochrane review: some critical comments
van der Donk, L. J. & Pouwer, F., Jun 2015, In : Diabetic Medicine Online. 32, 6, p. 839

Living with type 1 diabetes is challenging for Zambian adolescents: Qualitative data on stress, coping with stress and quality of care and life

Suicidal ideation or non-suicidal self-harm? A mismatch between the DSM-IV criterion and PHQ-9 item nine
The association between glucose-lowering drug use and mortality among breast cancer patients with type 2 diabetes

The association between mindfulness and emotional distress in adults with diabetes: could mindfulness serve as a buffer?
Results from Diabetes MILES: The Netherlands

The association between types of eating behaviour and dispositional mindfulness in adults with diabetes. Results from Diabetes MILES. The Netherlands

Depression, anxiety and self-care behaviours of young adults with Type 2 diabetes: results from the International Diabetes Management and Impact for Long-term Empowerment and Success (MILES) Study

Anxiety, depression and timing of insulin treatment among people with type 2 diabetes: Nine-year follow-up of the Nord-Trøndelag Health Study, Norway

Depressive Symptom Clusters Differentially Predict Cardiovascular Hospitalization in People With Type 2 Diabetes

Diabetes mellitus and comorbid depression in Zambia

Erythrocyte fatty acid profiles and plasma homocysteine, folate and vitamin B6 and B12 in recurrent depression: Implications for co-morbidity with cardiovascular disease

Fear of hypoglycaemia in adults with Type 1 diabetes: results from Diabetes MILES - The Netherlands

If it does not significantly change HbA1c levels why should we waste time on it? A plea for the prioritization of psychological well-being in people with diabetes

Negative appraisals of insulin therapy are common among adults with Type 2 diabetes using insulin: Results from Diabetes MILES - Australia cross-sectional survey

Stressful life events and incident metabolic syndrome: the Hoorn study

Type D personality, suboptimal health behaviors and emotional distress in adults with diabetes: Results from Diabetes MILES–The Netherlands
Beta-blockers and depression in elderly hypertension patients in primary care

Associations between economic hardship and markers of self-management in adults with type 2 diabetes: results from Diabetes MILES - Australia

Comment on Schmitz et al. Recurrent subthreshold depression in type 2 diabetes: an important risk factor for poor health outcomes.

Diabetes-specific emotional distress in people with Type 2 diabetes: a comparison between primary and secondary care

Effects of oxidative stress on fatty acid- and one-carbon-metabolism in psychiatric and cardiovascular disease comorbidity

Endothelial dysfunction is associated with a greater depressive symptom score in a general elderly population: the Hoorn Study

Further investigation of the psychometric properties of the Insulin Treatment Appraisal Scale among insulin-using and non-insulin-using adults with type 2 diabetes: results from Diabetes MILES-Australia

Managing hypoglycaemia in diabetes may be more fear management than glucose management: A practical guide for diabetes care providers.

Managing hypoglycaemia in diabetes may be more fear management than glucose management: a practical guide for diabetes care providers

Mindfulness-based cognitive therapy for people with diabetes and emotional problems: long-term follow-up findings from the DiaMind randomized controlled trial

Patient-reported outcomes in primary care patients with COPD: psychometric properties and usefulness of the Clinical COPD Questionnaire (CCQ). A cross-sectional study

Psychometric properties of the Exercise Self-efficacy Scale in Dutch Primary care patients with type 2 diabetes mellitus

Qualitative observation instrument to measure the quality of parent-child interactions in young children with type 1 diabetes mellitus

Response to Kawada. Depressive symptoms and HbA1c in patients with Type 1 and Type 2 diabetes

Self-reported access to and quality of healthcare for diabetes: do the severely obese experience equal access?

Severe obesity and diabetes self-care attitudes, behaviours and burden: implications for weight management from a matched case-controlled study. Results from Diabetes MILES–Australia

The individual and combined effect of colorectal cancer and diabetes on health-related quality of life and sexual functioning: results from the PROFILES registry

Toward defining a cutoff score for elevated fear of hypoglycemia on the hypoglycemia fear survey worry subscale in patients with type 2 diabetes

Compromised quality of life in patients with both Type 1 diabetes mellitus and coeliac disease

Diabetes Attitudes, Wishes and Needs second study (DAWN2™): cross-national benchmarking of diabetes-related psychosocial outcomes for people with diabetes

Adverse effects of depression on glycemic control and health outcomes in people with diabetes: a review

Depression and risk of mortality in people with diabetes mellitus: a systematic review and meta-analysis

Depressive symptoms, insulin sensitivity and insulin secretion in the RISC cohort study

Development and validity of the Patient-centred COPD Questionnaire (PCQ)

Development of a smoking abstinence self-efficacy questionnaire
Diabetes Attitudes Wishes and Needs 2 (DAWN2): a multinational, multi-stakeholder study of psychosocial issues in diabetes and person-centred diabetes care

Diabetes Attitudes, Wishes and Needs second study (DAWN2™): cross-national benchmarking indicators for family members living with people with diabetes

Differential associations between depressive symptoms and glycaemic control in outpatients with diabetes

Does the shortage of diabetes specialists in regional and rural Australia matter? Results from Diabetes MILES–Australia

Effects of exercise training on quality of life, symptoms of depression, symptoms of anxiety and emotional well-being in type 2 diabetes mellitus: a systematic review

Ethnic aspects of emotional distress in patients with diabetes-the Amsterdam Health Monitor Study

Psychometric and screening properties of the WHO-5 well-being index in adult outpatients with Type 1 or Type 2 diabetes mellitus

Severely obese people with diabetes experience impaired emotional well-being associated with socioeconomic disadvantage: results from diabetes MILES - Australia

The association between diabetes and an episode of depressive symptoms in the 2002 World Health Survey: an analysis of 231,797 individuals from 47 countries

The effects of a mindfulness-based intervention on emotional distress, quality of life, and HbA(1c) in outpatients with diabetes (DiaMind): a randomized controlled trial

The impact of comorbidity on Health-Related Quality of Life among cancer survivors: analyses of data from the PROFILES registry

The longitudinal association between depressive symptoms and initiation of insulin therapy in people with type 2 diabetes in primary care
Association of coexisting diabetes and depression with mortality after myocardial infarction

Biological effects of add-on eicosapentaenoic acid supplementation in diabetes mellitus and co-morbid depression: a randomized controlled trial

Diabetes MILES—Australia (management and impact for long-term empowerment and success): methods and sample characteristics of a national survey of the psychological aspects of living with type 1 or type 2 diabetes in Australian adults

Diabetes MILES—The Netherlands: rationale, design and sample characteristics of a national survey examining the psychosocial aspects of living with diabetes in Dutch adults

Higher levels of psychological distress are associated with a higher risk of incident diabetes during 18 year follow-up: results from the British household panel survey

Is a severe clinical profile an effect modifier in a Web-based depression treatment for adults with type 1 or type 2 diabetes? Secondary analyses from a randomized controlled trial

Managing co-morbid depression and anxiety in primary care patients with asthma and/or chronic obstructive pulmonary disease: study protocol for a randomized controlled trial

Personality as a risk factor for the metabolic syndrome: a systematic review

Quality of life of children with type 1 diabetes: a systematic review

Screening for type 2 diabetes does not reduce mortality over 10 years

Screening tools used for measuring depression among people with Type 1 and Type 2 diabetes: a systematic review

Suboptimal glycemic control in type 2 diabetes: a key role for anhedonia?

Testing the effectiveness of a self-efficacy based exercise intervention for inactive people with type 2 diabetes mellitus: design of a controlled clinical trial

The course of depressive symptoms in primary care patients with type 2 diabetes: results from the Diabetes, Depression, Type D Personality Zuidoost-Brabant (DiaDDZoB) Study
The longitudinal association between glycaemic control and health-related quality of life following insulin therapy optimisation in type 2 diabetes patients. A prospective observational study in secondary care

Type D (distressed) personality in primary care patients with type 2 diabetes: validation and clinical correlates of the DS14 assessment

Initiation of insulin glargine in patients with Type 2 diabetes in suboptimal glycaemic control positively impacts health-related quality of life. A prospective cohort study in primary care

Validation of the Turkish version of the Centre for Epidemiologic Studies Depression Scale (CES-D) in patients with type 2 diabetes mellitus

Quality of the parent-child interaction in young children with type 1 diabetes mellitus: study protocol

Limited effect of screening for depression with written feedback in outpatients with diabetes mellitus: a randomised controlled trial

Prevalence of depression in individuals with impaired glucose metabolism or undiagnosed diabetes: a systematic review and meta-analysis of the European Depression in Diabetes (EDID) Research Consortium

Maternal depression and child development after prenatal DHA supplementation

Development and reach of a web-based cognitive behavioural therapy programme to reduce symptoms of depression and diabetes-specific distress

Development of the Tilburg Pregnancy Distress Scale: the TPDS

Dimensionality and scale properties of the Edinburgh Depression Scale (EDS) in patients with type 2 diabetes mellitus: the DiaDDeoB study

Disease management for co-morbid depression and anxiety in diabetes mellitus: design of a randomised controlled trial in primary care
Supplementation with eicosapentaenoic omega-3 fatty acid does not influence serum brain-derived neurotrophic factor in diabetes mellitus patients with major depression: a randomized controlled pilot study

Testing the effectiveness of a mindfulness-based intervention to reduce emotional distress in outpatients with diabetes (DiaMind): design of a randomized controlled trial

Validation of the Turkish version of the problem areas in diabetes scale

Web-based depression treatment for type 1 and type 2 diabetic patients: a randomized, controlled trial

Two recently published meta-analyses on the effectiveness of mindfulness-based interventions: what should the reader make of it?

Type 2 diabetes mellitus as a risk factor for the onset of depression: a systematic review and meta-analysis

Predictors of incident major depression in diabetic outpatients with subthreshold depression

Psychophysiological biomarkers explaining the association between depression and prognosis in coronary artery patients: a critical review of the literature

The Epidemiology of Depression and Diabetes

Psychological risk factors of micro- and macrovascular outcomes in primary care patients with type 2 diabetes: rationale and design of the DiaDDZoB Study

Diabetes-specific emotional distress mediates the association between depressive symptoms and glycaemic control in Type 1 and Type 2 diabetes

Does emotional stress cause type 2 diabetes mellitus? A review from the European Depression in Diabetes (EDID) Research Consortium

Prevalence of comorbid depression is high in out-patients with Type 1 or Type 2 diabetes mellitus. Results from three out-patient clinics in the Netherlands
Eicosapentaenoic acid as an add-on to antidepressant medication for co-morbid major depression in patients with diabetes mellitus: a randomized, double-blind placebo-controlled study

Plasma and erythrocyte fatty acid patterns in patients with recurrent depression: a matched case-control study

Should we screen for emotional distress in type 2 diabetes mellitus?

Insulin therapy and quality of life. A review

Online cognitieve gedragstherapie voor diabetespatiënten met depressieve klachten: een gerandomiseerd gecontroleerd onderzoek

Depressive symptoms are associated with physical inactivity in patients with type 2 diabetes. The DIAZOB Primary Care Diabetes study

Symptoms of depression and diabetes-specific emotional distress are associated with a negative appraisal of insulin therapy in insulin-naïve patients with Type 2 diabetes mellitus. A study from the European Depression in Diabetes [EDID] Research Consortium

Associations between vascular co-morbidities and depression in insulin-naïve diabetes patients: the DIAZOB Primary Care Diabetes study

Depression and quality of life in patients with diabetes: a systematic review from the European depression in diabetes (EDID) research consortium

Depression and type 2 diabetes over the lifespan: a meta-analysis. Response to Mezuk et al

Serious diabetes-specific emotional problems in patients with type 2 diabetes who have different levels of comorbid depression: a Polish study from the European Depression in Diabetes (EDID) Research Consortium

Diabetes-related symptom distress in association with glucose metabolism and comorbidity: the Hoorn Study
