Administrative tasks relating to education

Responsible for the statistical teaching of Epidemiology and Biostatistics, the academic line modul 10 for medical students and biomechanics students

Experience as teacher, examiner and supervisor

Since 2005, I have been an instructor in group lessons of epidemiology and biostatistics for medical and biomechanics students.

Since 2013, I have been responsible for the lectures in statistics for third year medical and biomechanics students, including participated in forming the exam questions

Since 2015, I have been teaching the Study-start assignments for medical students.

Furthermore I have been co-supervisor in connection with bachelor and master's thesis projects.

Methods, materials and tools

I holdtimerne til epidemiologi og biostatistik arbejdes med relevante problemstillinger som belyser de statistiske udfordringer i den sundhedsvidenskabelige verden. De bliver gennemgået i vores eget udarbejdede kompendium. I forelæsningerne benyttes ofte små videosekvenser og små sjove anekdoter for at øge studenteraktiviteten og fremme dialogen, samt for at gøre statistik en sjov oplevelse for medicin studerende.

Uddannelsesudvikling

Vi arbejder løbende med at udvikle og tilpasse undervisningen for at styrke de studerendes læring. For eksempel vil vi forsøge at implementere statistik programmet STATA i holdundervisningen
