Teaching portfolio

Pedagogical Idea

Educating students in an activating and inspiring way, being a trustworthy supervisor and at the same time being a respectable representative of the higher education system - all these aspects are essential for my self-conception as university professor. And from a personal perspective it is even more: It is a versatile, interesting and demanding day-to-day work challenge, which gives me the opportunity to create values by educating, supervising and mentoring eager students, by translating my research results into teaching materials and providing research-based input for the general public debate.

Being currently positioned as an associate professor at the University of Southern Denmark (SDU) after having worked for many years as a researcher in private and public research institutions with relatively few teaching obligations, I feel that this broadened job profile of a university professor, which involves the balancing and fruitful exchange of research and education activities, translates into a very high job satisfaction for myself. And I am convinced that this also filters through to my regular teaching activities and my overall teaching philosophy.

Developing a teaching philosophy is a long-lasting process, which never really comes to an end. However, throughout the last years I have built up a stock of teaching skills and competences through regular lecturing and supervision experiences. Moreover, I have successfully gained the SDU certificate for Teaching in English and have completed the SDU's Lecturer Training Programme (LTP), which provides an important platform to get peer supervision for daily teaching activity, learn about new pedagogical methods and exchange my experience with my fellow colleagues at SDU.

The LTP also helped me to shape a clear vision of my teaching philosophy: To me, teaching means to inspire my students to seize the unique spirit of academic work, to think and act analytically as well as to motivate students to build up and apply the knowledge, skills and competences they need for their own career choices.

I regard teaching as being more than just communicating expert knowledge. It incorporates also the provision of hands-on examples to emphasize the knowledge presented in the literature, the provision of appropriate learning and working tools (such as computer software but also general writing skill) as well as opening up the possibility to students to apply their acquired knowledge in real-life settings. And finally, for me it is also important to create a class atmosphere that is stimulating and enables a good communication between the students and the lecturer as well as among the students themselves.

Pedagogical competences

Throughout the last years I have gained considerable experience in teaching activities for students at the Bachelor, Master and PhD level. Moreover, I have also presented my research papers at various international conferences. Presenting these findings in front of a large audience also helped me to train and improve my public speaking and presentations skills. With regard to teaching evaluations, I have predominately received a positive feedback (*) from my students and have been awarded with the *BHJ Fondens Teaching Award* for the best lecturer performance in Business and Social Science programs at SDU Campus Sønderborg in 2013, which is based on student votes.

(*) Obviously, I am aware that pleasing the students in class (and receiving positive course evaluations) should not be the

only goal of teaching. It may well be necessary to evoke the students' displeasure (and thus risk to receive a bad student evaluation) if a heavy workload is needed to achieve the overall course aim. Thus, the teacher's and students' objective function is not always identical. Nevertheless, I always try to be in a good communication with the students, respect their needs and feedback. I am well aware that it is them – and their learning outcome – that should be ultimately the key focus of my teaching activity.

I am continuously working on conceptual teaching projects that shall improve my own teaching skills as well as contribute to the steady improvement of the teaching quality at the Department of Business & Economics at the SDU. I will give two recent examples here. A first project *Development of an Introductory Toolbox for Spatial Business Development* has been funded by the Faculty of Business and Social Sciences. The goal of the project is to build up case studies and associated e-learning materials for courses related to spatial economics and business development being taught at the business management programs at SDU.

In the course of the project, we have formed a project team consisting of two professors and three student assistants. The main task has been to build up self-containing case studies in the area of spatial business development (e.g. logistic and supply chain optimization, location decisions of mobile firms and entrepreneurs). This combination of theoretical case study work and hands-on software application constitutes the toolbox and intends to equip the students with the necessary theories and competences in spatial business development, which they will then need to apply to real-life settings.

Another conceptual teaching project is a spin-off from my LTP activities and has been conducted in cooperation with a fellow professor at the SDU. The project covers teaching experiments and student surveys on the topic of *Enterlecturing - Are entertainment activities a proper means to improve the quality of lecturing practice in higher education?*

In the course of these teaching experiments, we have introduced different teaching innovations related to the use of entertaining activities such as the use of interactive polls, classroom games, complementary events outside the lecture hours (e.g. movie nights based on documentary films, a European election debate with Danish candidates for the EU parliament), automated PowerPoint presentations with different media elements, writing workshops etc.

The students have then been asked to report their perception of these teaching innovations by means of different surveys. The results of the experiments have been documented in a working paper. They show that students generally perceive education and entertainment as two complementary elements that are jointly able support to the learning outcome and understanding of the topic. The results further show that a sound balance between profound teaching and an interactive and lively class environment is needed to provide a positive stimulus for the overall motivation and in-depth learning outcome of students.
