Pædagogical idea

In my teaching, my focus is on disclosing the knowledge and methods of the subject in such a way that students will have the ability to understand the content. My focus is on presenting the content in a clear and manageable way, so that my teaching supports the students' independent reading of the material, critical thinking and their ability to analyse topics that are relevant to the subject. In the teaching I emphasize that the students are active and ask questions to clarify misunderstandings right then and there. Along the way, it is the aim to take the analysis to a higher and higher abstraction level.

In my teaching I like to use examples to illustrate the main points and key concepts of the subject.
