

Formal Pedagogical Education

Lecturer Training Program for university teachers, University of Southern Denmark (06/2013)

Uddannelsesadministrative Opgaver

Responsible for Epidemiology and Biostatistics on module 4, for medical students and biomechanical students

Erfaring med Undervisning Vejledning og Eksamen

Since 2009 I have been teaching first year medical students and biomechanical students in epidemiology and biostatistics as an instructor. I also taught one semester in Genetics. Since 2012 I have also given lectures in Epidemiology to first year medical students and biomechanical students and have been responsible for conducting and evaluating examinations.

Since 2010 I have supervised medical students in group-assignments (Studie Starts Opgaven), and have occasionally taught Epidemiology to third year medical students and biomechanical students.

Also I am continuingly supervising bachelor and master-students, in projects involving laboratory-, literature- and statistical-skills for students of Natural sciences and Health sciences.

Metoder, Materialer og Redskaber

I use student activating instruments such as peer-sum meetings to gain peer-learning. In the teaching curriculum I aim to include relevant problems from the health literature. The examination is a written assignment, which mirrors the problems and elements from the lectures and class room teaching. During lectures I use Shakespeak or Polleverywere to engage the dialog and to test the students understanding of selected problems.

Uddannelsesudvikling og Universitetspædagogisk Forskning

I am continuously working to improve and adjust my teaching to improve students learning.
