Documents the pedagogical and didactical competences

I have more than 20 years of teaching experience. Also, I have followed the pedagogical courses offered by SDU.

Teaching philosophy

The core philosophy is that once skills are learned, this generates a natural interest in / stimulate interest in the field. This is done by 1) relating theory to relevant cases 2) and thus creating curiosity (both in terms of theory, application The basic set-up I follow is grounded in the idea that the students need to be introduced to the basic concepts of methodology, concepts and theory before applying those theories for real-world application and analysis. The latter is supported to simple examples and problem solving. I also strongly support group work, which I believe is a strong vehicle for learning, discussion and trying out the core course concepts.

Coherence in how you present yourself

I strongly encourage interactive and openminded approach to viewpoints and worldviews. But I will always stay loyal to the theory / methodology I present.
